Professional Summary

Computer Science and Engineering undergraduate with hands-on experience in full-stack development, AI-powered applications, and REST API development, proficient across Java, Python, JavaScript, TypeScript, Node.js, MongoDB, and Docker.

Education

Ghousia College of Engineering

Bachelor of Engineering – Computer Science and Engineering

Expected 2027

CGPA: 8.0/10

Projects

OpenClaw Echo – Autonomous AI Agent Framework | Node.js, TypeScript, Python, LangChain, Docker GitHub

- Engineered an autonomous AI agent framework integrating Google Gemini, Ollama, LangChain, and Telegram Bot API with hybrid AI model routing, enabling automatic fallback between cloud and local LLMs based on task complexity.
- Implemented persistent RAG-based memory using SQLite and autonomous background task scheduling, allowing agents to retain context and execute multi-step tasks without manual intervention.
- Built real-time monitoring dashboards with Streamlit and Vite, containerized the full application stack with Docker, and deployed it on Railway for continuous operation.

Smart Hostel Management System | Node.js, Express.js, MongoDB, JWT, Chart.js

GitHub

- Developed a full-stack hostel management platform with JWT authentication and role-based access control, separating student and administrator permissions across all modules.
- Built complaint management, leave request, room allocation, notice board, and feedback modules backed by RESTful APIs on MongoDB, streamlining day-to-day hostel operations.
- Designed an interactive analytics dashboard using Chart.js to visualize complaint trends, room occupancy, and hostel statistics for administrators.

JobFinder – Full-Stack Remote Job Search Application | Node.js, Express.js, MongoDB, REST APIs

GitHub

- Developed a full-stack remote job search application with secure JWT authentication and personalized job management for registered users.
- Integrated the Remote API through a backend proxy layer to eliminate CORS issues and retrieve real-time remote job listings without exposing API credentials to the client.
- Designed RESTful APIs and MongoDB data models for secure, user-specific saved jobs, paired with a responsive React interface for browsing and filtering listings.

Technical Skills

Programming Languages: Java, Python, JavaScript, TypeScript, HTML5, CSS3

Frontend Development: React.js, Tailwind CSS, Bootstrap, Responsive Web Design

Backend Development: Node.js, Express.js, RESTful APIs, JWT Authentication, bcrypt, API Integration

Databases: MongoDB, MySQL, SQLite

AI & Frameworks: LangChain, Google Gemini API, Ollama, Streamlit, Retrieval-Augmented Generation (RAG)

Tools & Platforms: Git, GitHub, Docker, Postman, VS Code, Railway

Core Computer Science: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, Software Engineering

Certifications & Achievements

- IBM SkillsBuild – SHE INNOVATES Program (Selected Participant, 2024)
- Participated in InnovateX 4.0 – International Tech Fest, Presidency University (April 2026)
- Co-authored a technical article on Conversational AI Trends, published in the college technical magazine
